

NEW: Suppression Fire Detector

The Suppression Fire Detector is a new product developed by Polytronic. It has a rugged aluminum casing so that it can be used both indoors and outdoors.

Application:

The Suppression Fire Detector can be placed in front of targets and will detect any shots that enter the detection window (maximum size 10 x 5 meter). The target will then react accordingly (e.g. the target will stay down for a preprogrammed time). The Suppression Fire Detector allows the creation of realistic combat scenarios.

Technical Specifications:

Caliber	unlimited
Projectile Velocity	At least 450m/sec at target
Operating Rate	2000 rounds/min
Power	Mains powered
Detection Window (W x H)	Max 10 X 5m / Min 0.7m x 0.5m
Operating Conditions	-25 °C to +85 °C at 98% relative Humidity
Enclosure Rating	IP 67
Dimension (LxWxH)	950x110x90mm
Weight	3kg
